Digital Workers for Legal

FOCUS ON SERVING YOUR CLIENTS BETTER. GET MORE BILLABLE HOURS.

An estimated **23%** of a lawyer's work could be automated

Less than **30%** (2.3 hours) of a lawyer's workday is spent on billable tasks

57% of leaders in legal believe technology has improved productivity

Lawyers spend a large portion of their day sifting through data and performing administrative tasks, giving them less time for more strategic, client-focused work. However, many of the front-office and back-office tasks they perform can be automated, allowing them to increase customer satisfaction and reduce non-billable time.

A lawyer's job relies on being able to onboard clients, involving administrative work that takes them away from direct client work. Lawyers also spend much of their time reviewing contracts and other legal documents and finding the information required to adequately represent a client. This involves hours of tedious research and data entry that bog down a lawyer's time.

Whether tasks are administrative or related to research and data entry, digital workers can do the work. This frees up a lawyer's time, speeds up processes and reduces the number of errors that typically result when these tasks are done manually. The result is improved relationships with clients and more billable hours.

THE DIFFERENCE DIGITAL WORKERS CAN MAKE

Digital workers are software robots that combine the power of AI and machine learning to perform repetitive tasks that take up valuable human time. These digital workers augment the human workforce, working alongside humans and allowing them to focus on more high-value tasks, while lowering costs and eliminating errors.

The Ampliforce team of experts is ready to bring their years of experience in the field of automation and AI to the unique needs of your company. It is our goal to ensure the process of automation goes smoothly. Our team has developed a complete end-to-end automation solution and there are no third-party integrations required.

We know you want your automation solution working for you as quickly as possible, which is why we deploy within days or weeks. But we don't stop there. We want you to get the most out of your automation solution, which is why we will work closely with you to ensure you understand how it works. understand how your solution works.

TASKS DIGITAL WORKERS CAN PERFORM FOR LEGAL

Intake and classify documents from a variety of sources

Extract keywords based on pre-configured domains

Detect patterns in historical data for greater insight

Review documents for anomalies and omissions

Relate content to context in legal documents

Flag data and documents for review

Why Use Digital Workers for Legal

WORK WITH STRUCTURED & UNSTRUCTURED DATA

Digital workers can perform intelligent document processing (IDP), taking the unstructured data from emails, PDF files and other sources and putting it in a structured, usable format.

EASY CONTRACT MANAGEMENT

Digital workers can take over the task of reviewing client contracts for consistency and the presence of anomalies, saving lawyers hours of their time and ensuring contracts are error-free.

SIMPLIFIED RESEARCH

Digital workers can go through and pull relevant information from case law and statutes, eliminating the need for lawyers to spend hours looking through volumes and digital files.

CASE AND RECRUITMENT PLANNING

Digital workers can comb through historical data of past cases to detect patterns in how a particular judge might rule in a case or what strategies have worked to recruit new clients.

ENHANCED COMPLIANCE

Regulations and laws are always evolving, and digital workers can keep up with those changes, ensuring you are fully compliant at every stage of the work you do for your clients.

ENHANCED DATA SECURITY

Your data is never stored with the digital workers and is always fully encrypted, whether at rest or in transit, providing you with full data security.
